

GlucoControl is a **Free** PDA program (Pocket PC), that helps to control the glucose levels in blood, it replaces the classic diabetes notebook.

GlucoControl, facilitates data entry, in addition to the typical controls, it is possible to introduce extra controls with insulin supplement, lunch time, etc..., which allows to control and to understand the ascents and slopes of glucose.

It automatically calculates the glucose average in blood in the last 7 and 30 days. It generates line graphs with the evolution of glucose since N days specified, shows the bands of danger over 200 and underneath 50 and facilitates the understanding of the curves of glucemia in blood.

The system works with PDA based on Pocket PC, the information is stored in a Access data base, which allows to export the information to a conventional PC and to make a detailed study of the glucose controls.
